# Jake Steele

Los Angeles, CA | jakesteele.engineer@gmail.com | Portfolio | LinkedIn | GitHub

## SUMMARY

Computer science graduate student with technical leadership experience and experience in production data pipelines, full-stack and mobile applications, SaaS software testing, and machine learning research and analysis.

## TECHNICAL SKILLS

**Languages:** Python, SQL, Java, JavaScript, C++, HTML, CSS, Liquid
**Data and Analytics:** Apache Airflow, ClickHouse, MinIO, MariaDB, PostgreSQL, MongoDB, Metabase
**Web and Applications:** React, React Native, Node.js, Express.js, Supabase, REST APIs
**Tools and Practices:** Docker, Git/GitHub/GitLab, ETL/ELT, data validation, exploratory testing, Agile

## TECHNICAL PROJECTS

**Graduate Research in Algorithmic Fairness | CSULA**

- Completed COMPAS replication for ongoing thesis research, comparing individual and combined fairness interventions across pre-, in-, and post-processing stages in a machine learning pipeline.

**Innventory | React, Supabase, PostgreSQL | Technical Lead**

- Led architecture, schema design, and code reviews for a hotel inventory app; implemented authentication and manager/staff permissions using Postgres Row-Level Security.

**Weather Analytics Pipeline | Python, Airflow, ClickHouse, Metabase | Solo Project**

- Built an Open-Meteo API-to-dashboard pipeline with timestamp normalization, deduplication, hourly aggregation, and Metabase visualizations in a Docker environment.

## EXPERIENCE

**VS Media, Inc. | Data Engineer | Independent Contractor** *Mar 2026–Present*

- Developed production rate limited API ingestion pipelines in Python and Airflow, integrating paced API extraction, MinIO raw archival, ClickHouse staging, validation, and deduplicated publication.
- Built Debezium/Redpanda CDC prototypes; Python batching raised observed test throughput from ~4.4 to ~1,175 rows/sec, loading 1.83 million records into ClickHouse in under 26 minutes.
- Refactored a YAML-driven Airflow framework to improve configuration validation, connection handling, and diagnostic logging.

**Snap Inc. | Software Engineering Scholar** *Jun–Aug 2025*

- Led engineering for SnapStudy, a React Native study-group prototype; built timers, navigation, and Supabase authentication/API workflows with a cross-functional team and nonprofit advisor.
- Built rule-based trivia and an OpenAI-powered fantasy RPG with chat navigation, conversation handling, trivia answer validation, and scoring.

**AppFolio | Payments Software Quality Assurance Intern** *May–Aug 2023*

- Performed exploratory testing and risk assessment for SaaS payment workflows; reported defects, suggested fixes, and tracked resolution with developers, product, and UX partners.
- Monitored frequent releases for errors and supported testing and launch of a new payment method.

**Freelance Shopify Developer** *2022–2023*

- Refactored legacy code in JavaScript/Liquid and trained the client to maintain the site.

## EDUCATION

**California State University, Los Angeles | Master of Science in Computer Science** *Expected May 2027*

**General Assembly | Software Engineering Immersive Certificate** *2022*

**Occidental College | Bachelor's in Biochemistry | Spanish Minor** *2013*
